Comprehensive Analysis and Dietary Strategies with Tableau

1. INTRODUCTION

Project Overview
This project analyzes college food choices using Tableau dashboards.

Purpose
To identify dietary patterns and support healthier decisions.

2. IDEATION PHASE

Problem Statement
Students often adopt unhealthy eating habits affecting wellbeing.

Empathy Map Canvas
Students need quick, healthy, affordable meals.

Brainstorming
Interactive dashboards reveal dietary trends.

3. REQUIREMENT ANALYSIS

Customer Journey Map
Collect survey→Clean data→Analyze→Dashboard→Insights.

Solution Requirement
Tableau, Excel, Kaggle dataset.

Data Flow Diagram
Dataset→Preprocessing→Tableau→Dashboard.

Technology Stack
Tableau Public, Excel, GitHub.

4. PROJECT DESIGN

Problem Solution Fit
Interactive visual analytics for dietary decisions.

Proposed Solution
Multi-dashboard Tableau solution.

Solution Architecture
Dataset→ETL→Visualization→Insights.

5. PROJECT PLANNING & SCHEDULING

Data Collection, Cleaning, Dashboard Design, Testing, Documentation.

6. FUNCTIONAL AND PERFORMANCE TESTING

Verified preprocessing, filters, calculations, dashboard rendering and story navigation.

7. RESULTS

Dashboard highlights: KPI cards, breakfast, coffee, health, vitamin intake, comfort food, exercise, eating-out, story insights.

8. ADVANTAGES & DISADVANTAGES

Advantages: Interactive, easy insights, decision support.
Disadvantages: Limited dataset size, self-reported responses.

9. CONCLUSION

The Tableau dashboards successfully identify dietary trends among college students.

10. FUTURE SCOPE

Predictive analytics, real-time data, mobile dashboards.
