

Comprehensive Analysis and Dietary Strategies with Tableau: A College Food Choices Case Study using Tableau

TEAM ID	
PROJECT TITLE	Comprehensive Analysis and Dietary Strategies with Tableau: A College Food Choices Case Study
MAX MARKS	3 MARKS

6.3 – Data Preparation

Sheet Type	Sheet Title
KPI SUMMARY CARD	KPI
Breakfast Consumption	Bar Chart
Eating Out vs Cooking Frequency	Dual Line Chart
Health Category by Gender	Grouped Bar Chart
Vitamins Consumption by Gender	Line Chart
Health vs Greek Food Consumption	Grouped Bar Chart
People Feeling Health and Life Rewarded	Bubble Chart
Weight vs Exercise Frequency	Tree Map
Comfort Food Reasons	Bubble Chart

Comprehensive Analysis and Dietary Strategies with Tableau: A College Food Choices Case Study using Tableau

Sheet1: KPI Summary Card

1. We have to drag the measures values to the text.
2. And then we have to click on the text in that click on the (...) dots.
3. Then it displays the edit label box in that type the (count of GPA, AVG.GPA, AVG Weight, AVG. grade-level).
4. And then click ok.
5. In this by default measure name will display on filters and details.

OUTPUT:

Sheet2: Breakfast Consumption

1. In this first we have to change the breakfast to covert dimensions.
2. And then change the breakfast to CNT (breakfast). For that we have to click on the dropdown arrow in that click on the string.
3. Then it changes to the CNT (Break Fast).
4. After that we have to drag the breakfast to columns.
5. And drag the breakfast to rows.

Comprehensive Analysis and Dietary Strategies with Tableau: A College Food Choices Case Study using Tableau

6. In this there are two bars for this we have to name it.
7. For that click on the left side of the bar and then click edit alias and name the graphs.
8. For first bar name cereals, second bar name donuts.
9. And then click ok.

OUTPUT:

Sheet3: Eating Out vs Cooking Frequency

1. We have to drag the cook to the columns.
2. And then drag the eating out to the columns.
3. After that we have to drag the fruit day to the rows.

Comprehensive Analysis and Dietary Strategies with Tableau: A College Food Choices Case Study using Tableau

OUTPUT:

Sheet4: Health Category by Gender

1. We have to drag the gender to the colors.
2. After that we have to create calculated field to the health categories.
3. Formula → IF [healthy feeling] >=8 THEN "Highly healthy"
ELSEIF [Healthy feeling] >=5 THEN "moderately healthy"
ELSE "less healthy"
END.
4. And then drag the health categories to the columns.
5. And drag the gender to the rows.

Comprehensive Analysis and Dietary Strategies with Tableau: A College Food Choices Case Study using Tableau

OUTPUT:

Sheet5: Vitamins Consumption by Gender

1. We have to drag the fruit day to the columns.
2. And then we have to create calculated field for the total respondents.
3. Formula $\rightarrow$ count([GPA]).
4. And then drag the total respondents to the rows.
5. And drag the gender to the colors.
6. After that for the vitamin users (%) we have to change the aggregations $\rightarrow$ sum.
7. Then it represents sum (vitamins users (%)).
8. And then drag the vitamin users (%) to details.

Comprehensive Analysis and Dietary Strategies with Tableau: A College Food Choices Case Study using Tableau

OUTPUT:

Sheet6: Health vs Greek Food Consumption

1. We have to create calculated field for the health categories.
2. Formula → IF [healthy feeling] >=8 THEN "highly healthy"
ELSEIF [healthy feeling] >=5 THEN "moderately healthy"
ELSE "less healthy"
END
3. We have to drag the health categories to the columns.
4. And then drag the measures names to the columns, filters, colors.
5. And then drag the measure values to rows.
6. And click on the measure name in that we have to click on the show measure values shelf.
7. In the measure value shelf drag the Greek food and total respondents.

Comprehensive Analysis and Dietary Strategies with Tableau: A College Food Choices Case Study using Tableau

OUTPUT:

Sheet7: People Feeling Healthy and Life Rewarded

1. We have to change the healthy feeling to the aggregations →sum.
2. And drag the healthy feeling to the size in the marks card.
3. After that drag the healthy category to the label.
4. And then drag the gender to the colors.

Comprehensive Analysis and Dietary Strategies with Tableau: A College Food Choices Case Study using Tableau

OUTPUT:

Sheet8: Weight vs Exercise Frequency

1. we have to create calculated field for weight categories.
2. Formula $\rightarrow$ IF [weight] < 120 THEN "underweight"
ELSEIF [weight] <= 180 THEN "Normal"
ELSE "overweight"
END.
3. And drag the weight categories to the label in the marks card.
4. After we have to create calculated field for the average exercise frequency.
5. Formula $\rightarrow$ AVG([Exercise]).
6. And then drag the average exercise frequency to the size.
7. After that create calculated field for the breakfast.
8. Formula $\rightarrow$ count([breakfast] <> "no" / [total respondents] * 100.
9. And then drag the breakfast to the colors.
10. And drag the weight categories to label in the marks card.

Comprehensive Analysis and Dietary Strategies with Tableau: A College Food Choices Case Study using Tableau

OUTPUT:

Sheet9: Comfort Food reasons

1. We have to drag total respondents to size in the marks card.
2. And drag the comfort food to the label in the marks card.
3. We have to create calculated field for the average exercise frequency.
4. Formula $\rightarrow$ $AVG([Exercise])$.
5. And then drag the average exercise frequency to the color.
